“Securing the Virtual Environment: How to Defend the Enterprise Against Attack.”

This presentation offers a broad look across virtualization used in various industries as well as a narrow view of vulnerabilities in virtual environments. Examines the difference in a virtual model versus traditional computing models and the appropriate technology and procedures to defend it from attack: 1) dissects and exposes attacks targeted at the virtual environment and the steps necessary for defense; 2) covers information security in virtual environments: building a virtual attack lab, finding leaks, getting a side-channel, denying or compromising services, abusing the hypervisor, forcing an interception, and spreading infestations; 3) the state of security and compliance in the cloud.
